

EXPRESS NAILS flared flange pins, fixing anchors

The design features of our pin have enabled to increase its already excellent rigidity by another 20%.

- material fibre orientation is now uninterrupted
- no projecting interlocks

It is now **impossible** for your pins to get „locked together“ in the box or in your trouser pocket. **ADDITIONAL BENEFITS FOR THE CUSTOMER: You save money – because you save time!** Thanks to the „constriction“ at the lower end, Hedtmann flared flange pins can be installed in cement and other similar materials precisely, easily and quickly.

TECHNICAL INFORMATION

Area of application:

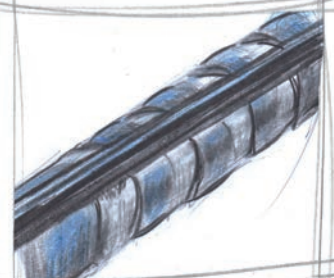

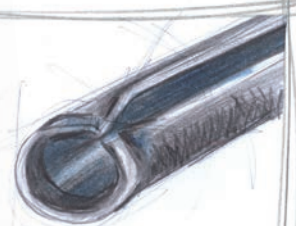

Hedtmann-Express nails can be used in concrete (> B25), solid brick, solid sand-lime brick, and compression-proof natural stone as well as for the purpose of insulation and as battens.

Advantages:

- quick and easy installation
- immediate loadability
- suitable for overhead installation of insulations (non-flammable)
- available in 6 and 8 mm diameters in all common lengths

Material:

tempered spring band steel, corrosion protection using a surface coating on both sides

USERS

ROOFERS . CARPENTERS . ELECTRICIANS . INSULATION INSTALLERS . PLUMBERS
